On-line process management

Have you ever wished you could lay your hands quickly on some vital piece of information such as how to contact important clients or staff members when they are not in their offices or the status of a particular project? Have you ever needed to know in a hurry how many licences you have for a particular piece of software, or how much time each staff member has spent on each task in a project, so that you can prepare a tender for another, similar project?

There is one product which will give you all of this information in one place, integrated, at your fingertips ...

ProcessExpress is a data-base driven information management tool which provides one-stop control of and access to facts, figures, projects, contacts and resources relating to an organisation. Built using the latest in Web database technology and based on the proven highly successful products CKB (developed for Connect-IBS) and CKM (used within Research Plus for many years), this GST-compliant product is due for release in the fourth quarter of 2000.

ProcessExpress facilitates enterprise and project management by:

- customising log-in depending on the user's role within the organisation
- providing personalised home screens where users can view the tasks and projects they are currently working on
- managing and integrating individual timesheets and projects
- generating project reports from individual timesheet task entries
- providing integrated asset management capabilities
- providing invoice and project reports
- enhancing security by allowing individuals to access only those parts of the site relating to projects or activities they are involved in
- capturing and providing access to corporate, employee, project and contact information
- allowing employees to build a library of resources and information for all staff to share, for example useful articles or known bugs and solutions.
- allowing project managers to view progress reports and schedules for the projects they are managing, helping to minimise cost and time overruns

- making it easy to update information through intuitive interface design
- providing summaries of projects to facilitate future tendering

In short, **Process Express** saves you time and effort by centralising all your information and making it available to all those who need it, and only to those who have authority to access it.
