

Large-scale web solutions

An amateur sport portal site:
iSport

iSport is a sports management company specialising in the management of junior sports via the Internet. Its target markets are "mass" sports which have a national or state based controlling hierarchy. **Research Plus** has created the system currently used to administer soccer, netball and cricket as well as other codes, and has built the system in its entirety.

Research Plus inherited a small-scale **iSport** site and built it into a much larger, more robust, more secure and scaleable database-driven web site with enhanced functionality. Paid for by advertisers, the site provides a mini-portal for amateur sporting organisations. It allows players and administrators to view (and administrators to create and modify) results, images, news and information for their local club, and to view international news for their chosen sport.

The site has been adapted to deal with different sports with different scoring methods and has been converted for international use (currently available in the UK and Australia).

iSport is one of the Top 50 most visited Internet sites in Australia. **iSport** has just had a major stakeholder come on board in the shape of Village Ten Online, which is a joint venture between Village Roadshow and the Ten TV Network. This will enable **iSport** to reach a global market.

To view our solution, visit these sites:

iSport netball: <http://www.isport.com.au/netball/netsw>

iSport cricket: <http://www.isport.com.au/cricket/nswca>

iSport soccer: <http://www.isport.com.au/soccer/ntl>
